Eric Michael

Eric has a BS from Indiana University and MSc from University of Oklahoma. He is a subject matter expert in the application of petroleum geochemistry and basin modelling for basin and field scale problems. Eric has 32+ years of operator industry experience (ConocoPhillips, USGS, Mobil) in conventional and unconventional (e.g., heavy oil, CBM, tight oil/gas) reservoirs performing subsurface risk and resource assessment for in-place volumes, hydrocarbon phase prediction and field development and optimization. He has coauthored 45+ publications and patents in using geochemistry and basin modeling for petroleum system analysis. Eric joined APT Houston in 2022 as Chief Geochemical Advisor for Americas.
