

Elizabeth Watt

Graduated in 2003 from the University of Calgary with a B.Sc. in geology. The next 5 years were spent in the exploration group for Burlington Resources working western Canada assets. The sale to ConocoPhillips led to a year in the technology group in Houston learning basin modelling with projects in Algeria, Peru, and Norway. Following this; a move to the Norwegian business unit allowed continued growth in basin modelling with projects in the Norwegian Barents Sea, North Sea, and Greenland. Back in Canada in 2015 saw a quick transition to unconventionals, beginning with basin modelling of the Montney across Alberta and British Columbia and quickly picking up geochemistry, including regional characterization and production allocation. After almost 10 years working the Montney; insights continue to be made on the origin and history of the formation, specifically focusing on the Blueberry Area.
